

## Cisco 350 Series Managed Switches

# Easy-to-Use Managed Switches That Provide the Ideal Combination of Features and Affordability

To stay ahead in a competitive marketplace, businesses need to make every dollar count. That means getting the most value from your technology investments, but it also means making sure that employees have fast, reliable access to the business tools and information they need. Every minute an employee waits for an unresponsive application and every minute your network is down has an effect on your profits. The importance of maintaining a strong and dependable business network only grows as your business adds more employees, applications, and network complexity.

When your business needs advanced security and features but value is still a top consideration, you're ready for the new generation of Cisco<sup>®</sup> Small Business managed switches: the Cisco 350 Series (Figure 1).

Figure 1. Cisco 350 Series Managed Switches

#### Cisco 350 Series Switches

The Cisco 350 Series, part of the Cisco Small Business line of network solutions, is a portfolio of affordable managed switches that provides a reliable foundation for your business network. These switches deliver the features you need to improve the availability of your critical business applications, protect your sensitive information, and optimize your network bandwidth to deliver information and applications more effectively. Easy to set up and use, the Cisco 350 Series provides the ideal combination of affordability and capabilities for small businesses and helps you create a more efficient, better-connected workforce.

The Cisco 350 Series is a broad portfolio of fixed-configuration managed Ethernet switches. Models are available with 8 to 48 ports of Fast Ethernet and 10 to 52 ports of Gigabit Ethernet connectivity, providing optimal flexibility to create exactly the right network foundation for your business. However, unlike other small business switching solutions that provide managed network capabilities only in the costliest models, all Cisco 350 Series Switches support the advanced security management capabilities and network features you need to support business-class data, voice, security, and wireless technologies. At the same time, these switches are simple to deploy and configure, allowing you to take advantage of the managed network services your business needs.

## **Business Applications**

Whether you need a basic high-performance network to connect employee computers or a solution to deliver data, voice, and video services, the Cisco 350 Series offers a solution to meet your needs. Possible deployment scenarios include:

- Secure desktop connectivity: Cisco 350 Series Switches can simply and securely connect employees working in small offices with each other and with all of the servers, printers, and other devices they use. High performance and reliable connectivity help speed file transfers and data processing, improve network uptime, and keep your employees connected and productive.
- Secure wireless connectivity: With its advanced security features, Power over Ethernet, Auto Smartports,
  QoS, VLAN, and access control features, the Cisco 350 Series Switches are the perfect foundation to add
  business-grade wireless to a business network.
- Unified communications: As a managed network solution, the Cisco 350 Series provides the performance
  and advanced traffic-handling intelligence you need to deliver all communications and data over a single
  network. Cisco offers a complete portfolio of IP telephony and other unified communications products
  designed for businesses. Cisco 350 Series Switches have been rigorously tested to help ensure easy
  integration and full compatibility with these and other products, providing a complete business solution.
- Highly secure guest connectivity. Cisco 350 Series Switches let you extend highly secure network
  connectivity to guests in a variety of settings, such as a hotel, an office waiting room, or any other area open
  to nonemployee users. Using powerful but easy-to-configure security and traffic segmentation capabilities,
  you can isolate your vital business traffic from guest services and keep guests' network sessions private
  from each other.

## Features and Benefits

Cisco 350 Series switches provide the advanced feature set that growing businesses require and that high-bandwidth applications and technologies demand. These switches can improve the availability of your critical applications, protect your business information, and optimize your network bandwidth to more effectively deliver information and support applications. The switches provide the following benefits.

#### **Ease of Management and Deployment**

Cisco 350 Series switches are designed to be easy to use and manage by commercial customers or the partners that serve them. They feature:

- Cisco Smart Network Application (SNA) is an innovative network-level monitoring and management tool
  embedded in Cisco 100 to 500 Series switches. It can discover network topology, display link status,
  monitor events, apply configurations, and upgrade software images across multiple switches in the network.
- The FindIT Network Manager and Probe are designed to manage Cisco 100 to 500 Series switches, routers, and wireless access points. The Manager lets you proactively manage the network instead of just reacting to events. FindIT Network Management is the perfect addition to your business network. For more information, visit https://www.cisco.com/go/findit.
- The Cisco FindIT Network Discovery Utility works through a simple toolbar on your web browser to discover
  Cisco devices on the network and display basic device information, inventory, and new firmware updates to
  aid in the configuration and speed the deployment of Cisco Small Business products. For more information,
  visit https://www.cisco.com/go/findit.

- The USB port on the front panel of the switch enables easy image and configuration transfer for faster deployment or upgrade.
- Simple-to-use graphical interfaces reduce the time required to deploy, troubleshoot, and manage the network and allow you to support sophisticated capabilities without increasing IT head count.
- The switches also support Textview, a full Command-Line Interface (CLI) option for partners that prefer it.
- Using Auto Smartports intelligence, the switch can detect a network device connected to any port and automatically configure the optimal security, Quality of Service (QoS), and availability on that port.
- Cisco Discovery Protocol discovers Cisco devices and allows devices to share critical configuration information, simplifying network setup and integration.
- Support for Simple Network Management Protocol (SNMP) allows you to set up and manage your switches
  and other Cisco devices remotely from a network management station, improving IT workflow and mass
  configurations.

## High Reliability and Resiliency

In a growing business where availability 24 hours a day, 7 days a week is critical, you need to assure that employees can always access the data and resources they need. The Cisco 350 Series supports dual images, allowing you to perform software upgrades without having to take the network offline or worry about the network going down during the upgrade.

## **Strong Security**

Cisco 350 Series switches provide the advanced security features you need to protect your business data and keep unauthorized users off the network:

- Embedded Secure Sockets Layer (SSL) encryption protects management data traveling to and from the switch.
- Extensive Access Control Lists (ACLs) restrict sensitive portions of the network to keep out unauthorized users and guard against network attacks.
- Guest VLANs let you provide Internet connectivity to nonemployee users while isolating critical business services from guest traffic.
- Support for advanced network security applications such as IEEE 802.1X port security tightly limits access
  to specific segments of your network. Web-based authentication provides a consistent interface to
  authenticate all types of host devices and operating systems, without the complexity of deploying IEEE
  802.1X clients on each endpoint.
- Advanced defense mechanisms, including dynamic Address Resolution Protocol (ARP) inspection, IP Source Guard, and Dynamic Host Configuration Protocol (DHCP) snooping, detect and block deliberate network attacks. Combinations of these protocols are also referred to as IP-MAC port binding (IPMB).
- IPv6 First Hop Security extends the advanced threat protection to IPv6. This comprehensive security suite
  includes ND inspection, RA guard, DHCPv6 guard, and neighbor binding integrity check, providing
  unparalleled protection against a vast range of address spoofing and man-in-the-middle attacks on
  IPv6 networks.
- Time-based ACLs and port operation restrict access to the network during predesignated times such as business hours
- Uniform MAC address-based security can be applied automatically to mobile users as they roam between wireless access points.

- Secure Core Technology (SCT) helps ensure that the switch is able to process management traffic in the face of a Denial-of-Service (DoS) attack.
- Private VLAN Edge (PVE) provides Layer 2 isolation between devices on the same VLAN.
- · Storm control can be applied to broadcast, multicast, and unknown unicast traffic.
- Protection of management sessions occurs using RADIUS, TACACS+, and local database authentication as well as secure management sessions over SSL, SSH, and SNMPv3.
- DoS attack prevention maximizes network uptime in the presence of an attack.

#### **Power over Ethernet**

Cisco 350 Series Switches are available with up to 48 PoE ports. This capability simplifies advanced technology deployments such as IP telephony, wireless, and IP surveillance by allowing you to connect and power network endpoints over a single Ethernet cable. With no need to install separate power supplies for IP phones or wireless access points, you can take advantage of advanced communications technologies more quickly and at a lower cost. Models support 802.3af PoE, 802.3at PoE+, and 60 Watt PoE.

## **Multigigabit Performance**

Network needs are changing quickly. Thanks to evolving wireless standards and the rising number of wireless devices, keeping up with data rates and growing traffic can be a challenge. Your traditional Ethernet infrastructure can support speeds up to 1 Gigabit per second (Gbps), but competing today requires much more capacity. One option is completely replacing your older cabling infrastructure and upgrading your hardware. But wouldn't it be better to increase network speed and traffic capacity in a way that's guick, inexpensive, and efficient?

Cisco's new Multigigabit Ethernet switches offer just that: an easy-to-deploy, budget-friendly solution that allows you to increase network speed and bandwidth using your existing cables. By partnering with other industry leaders to form the NBASE-T Alliance, Cisco uses NBASE-T technology to help you get more out of your existing infrastructure. Save time and money by avoiding upgrades and extending the life of your installed cable plants. And discover the benefits of meeting consumer demand for increased bandwidth and speeds without a large initial investment.

Multigigabit Ethernet technology uses capabilities in your existing cabling infrastructure to meet bandwidth requirements and provide up to five times the performance. The technology enables intermediate data rates of 2.5 and 5 Gbps to ease the jump between traditional rates of 1 Gbps and 10 Gbps. These intermediate rates run on most installed cables and preserve older UTP wiring, which is good for 802.11ac wireless LAN applications.

The technology also supports Power over Ethernet (PoE) forms, including PoE+ and 60W PoE. Cisco Multigigabit Ethernet switches help you avoid having to run multiple cables between switches and access points and let your networks welcome next-generation traffic speeds and data rates.

#### **Networkwide Automatic Voice Deployment**

Using a combination of Cisco Discovery Protocol, LLDP-MED, Auto Smartports, and Voice Services Discovery Protocol (or VSDP, a unique Cisco protocol), customers can deploy an end-to-end voice network dynamically. The switches in the network automatically converge around a single voice VLAN and QoS parameters and then propagate them out to the phones on the ports, where they are discovered. For example, automated voice VLAN capabilities let you plug any IP phone (including third-party phones) into your IP telephony network and receive an immediate dial tone. The switch automatically configures the device with the right VLAN and QoS parameters to prioritize voice traffic.

#### **IPv6 Support**

As the IP address scheme evolves to accommodate a growing number of network devices, the Cisco 350 Series can support the transition to the next generation of networking and operating systems such as Windows 8, Vista, and Linux. These switches continue to support previous-generation IPv4, allowing you to evolve to the new IPv6 standard at your own pace and helping ensure that your current network will continue to support your business applications in the future. Cisco 350 Series switches have successfully completed rigorous IPv6 testing and have received the USGv6 and IPv6 Gold certification.

## **Advanced Layer 3 Traffic Management**

The Cisco 350 Series enables a more advanced set of traffic management capabilities to help growing businesses organize their networks more effectively and efficiently. For example, the switches provide static LAN Layer 3 routing, allowing you to segment your network into workgroups and communicate across VLANs without degrading application performance.

With these capabilities, you can boost the efficiency of your network by offloading internal traffic-handling tasks from your router and allowing it to manage primarily external traffic and security.

Additionally, Cisco 350 models provide static Layer 3 routing features. With these capabilities, you can minimize the need to manually configure routing devices and simplify the ongoing operation of the network.

## **Power Efficiency**

The Cisco 350 Series integrates a variety of power-saving features across all models, providing the industry's most extensive energy-efficient switching portfolio. These switches are designed to conserve energy by optimizing power use, which helps protects the environment and reduce your energy costs. They provide an eco-friendly network solution without compromising performance. Cisco 350 Series switches feature:

- Support for the Energy Efficient Ethernet (IEEE 802.3az) standard, which reduces energy consumption by
  monitoring the amount of traffic on an active link and putting the link into a sleep state during quiet periods
- The latest Application-Specific Integrated Circuits (ASICs)
- Automatic power shutoff on ports when a link is down
- LEDs that can be turned off to save power
- Embedded intelligence to adjust signal strength based on the length of the connecting cable

#### **Expansion Ports**

The Cisco 350 Series provides more ports per Gigabit Ethernet switch than traditional switch models, giving you more flexibility to connect and empower your business. Gigabit Ethernet models offer 28 to 52 ports to give you more value, versus the 24-port or 48-port varieties with four shared ports that's common in the market. The Cisco 350 Series also offers mini gigabit interface converter (mini-GBIC) expansion slots that give you the option to add fiber-optic or Gigabit Ethernet uplink connectivity to the switch. With the ability to increase the connectivity range of the switches, you have more flexibility to design your network around your unique business environment and to easily connect switches on different floors or across the business.

#### **Peace of Mind and Investment Protection**

Cisco 350 Series switches offer the reliable performance and peace of mind you expect from a Cisco switch. When you invest in the Cisco 350 Series, you gain the benefits of:

- Limited lifetime warranty with Next-Business-Day (NBD) advance replacement (where available; otherwise same day ship).
- A solution that has been rigorously tested to help ensure optimal network uptime to keep employees connected to primary resources and productive.
- A solution designed and tested to easily and fully integrate with other Cisco voice, unified communications, security, and networking products as part of a comprehensive technology platform for your business.
- Complimentary software updates for bug fixes for the warranty term. To download software updates, go to https://www.cisco.com/cisco/web/download/index.html.
- Telephone technical support at no charge for the first 12 months following the date of purchase.
- Product warranty terms and other information applicable to Cisco products are available at https://www.cisco.com/go/warranty.
- Cisco Small Business products are supported by professionals in Cisco Small Business Support Center
  locations worldwide who are specifically trained to understand your needs. The Cisco Small Business
  Support Community, an online forum, enables you to collaborate with your peers and reach Cisco technical
  experts for support information.

#### **Cisco Limited Lifetime Hardware Warranty**

Cisco 350 Series switches offer a limited lifetime hardware warranty with NBD advance replacement (where available; otherwise same day ship) and a limited lifetime warranty for fans and power supplies.

In addition, Cisco offers software application updates for bug fixes for the warranty term and telephone technical support at no charge for the first 12 months following the date of purchase. To download software updates, go to <a href="https://software.cisco.com/download/navigator.html">https://software.cisco.com/download/navigator.html</a>.

Product warranty terms and other information applicable to Cisco products are available at <a href="https://www.cisco.com/go/warranty">https://www.cisco.com/go/warranty</a>.

#### **World-Class Service and Support**

Your time is valuable, especially when you have a problem affecting your business. Cisco 350 Series switches are backed by Cisco SMARTnet<sup>®</sup> Total Care<sup>™</sup> which provides affordable peace-of-mind coverage. Delivered by Cisco and backed by your trusted partner, this comprehensive service includes software updates and access to the Cisco Support Center, and it extends technical service to three years.

Cisco SMB products are supported by professionals in the Cisco Support Center, a dedicated resource for small business customers and networks, with locations worldwide that are specifically trained to understand your needs. You also have access to extensive technical and product information through the Cisco Support Community, an online forum that enables you to collaborate with your peers and reach Cisco technical experts for support information.

## **Product Specifications**

Table 1 gives the product specifications for the Cisco 350 Series Switches.

Table 1.Product Specifications

Feature	Description						
Performance							
Switching capacity and forwarding rate	Model Name	Switching Capacity in Gigabits per Second (Gbps)					
All switches are wire speed and nonblocking	SF350-08	1.19	1.6				
g	SF352-08	4.17	5.6

Protocol (DHCP) Relay at Layer 2 Internet Group Management Protocol (IGMP) versions 1, 2, specific multicasting is also supported and 3 snooping of multicasting is also supported and 3 snooping switches in the absence of a multicast router router (IGMP querier is used to support a Layer 2 multicast domain of snooping switches in the absence of a multicast router (IGMP querier is used to support a Layer 2 multicast domain of snooping switches in the absence of a multicast router (IGMP querier is used to support a Layer 2 multicast domain of snooping switches in the absence of a multicast router (IGMP querier is used to support a Layer 2 multicast domain of snooping switches in the absence of a multicast router (IGMP querier is used to support a Layer 2 multicast domain of snooping switches in the absence of a multicast router (IGMP querier is used to support a Layer 2 multicast domain of snooping switches in the absence of a multicast router (IGMP querier is used to support a Layer 2 multicast domain of snooping switches in the absence of a multicast router (IGMP querier is used to support a Layer 2 multicasting is also supported in the absence of a multicast router (IGMP querier is used to support a Layer 2 multicasting is also supported in the absence of a multicast router of the provides protocol (IGMP) querier is used to support specific multicasting is also supported in the absence of a multicasting is also supported in the absence of a multicasting is also supported in the switch (IGMP) querier is used to support a Layer 3 interface on physical port, LAG, VLAN interface, or loopback interface (IGMP) packets (IGMP) protocol (IGMP)		
Protocol (IGMP) versions 1, 2, and 3 snooping  IGMP Querier  IGMP querier is used to support a Layer 2 multicast domain of snooping switches in the absence of a multicast router  Head-Of-Line (HOL) blocking  HOL blocking prevention  Loopback Detection  Loopback detection provides protection against loops by transmitting loop protocol packets out of ports on which loop protection has been enabled. It operates independently of STP  Jumbo frames  Layer 3  IPV4 routing  Wirespeed routing of IPV4 packets Up to 1K static routes and up to 128 IP interfaces  IPV6 routing  Wirespeed routing of IPV6 packets Up to 1K static routes and up to 128 IP interfaces  IPV6 routing  Classless Interdomain Routing (CIDR)  Support for CIDR  Relay of DHCP traffic across IP domains  User Datagram Protocol (UDP) Prelay  Belay of DHCP traffic across Layer 3 domains for application discovery or relaying of bootP/DHCP packets  Switch functions as an IPV4 DHCP server serving IP addresses for multiple DHCP pools/scopes Support for DHCP options  Security  Secure Sockets Layer (SSL)  SSH is a secure replacement for Telnet traffic. SCP also uses SSH. SSH v1 and v2 are supported  SSH is a secure replacement for Telnet traffic. SCP also uses SSH. SSH v1 and v2 are supported  Secure Sockets Layer (SSL)  SSE support: Encypts all HTTPS traffic, allowing highly secure access to the browser-based management GU in the switch  IEEE 802.1X (Authenticator role)  Web-based authentication  Web based authentication provides network admission control through web browser to any host devices and operating systems  STP Bridge Protocol Data Unit (BPDU) Guard  A security mechanism to protect the network from invalid configurations. A port enabled for BPDU Guard is shut down if a BPDU message is received on that port	Protocol (DHCP) Relay at	Relay of DHCP traffic to DHCP server in different VLAN; works with DHCP Option 82
Head-Of-Line (HOL) blocking Loopback Detection Loopback detection provides protection against loops by transmitting loop protocol packets out of ports on which loop protection has been enabled. It operates independently of STP  Jumbo frames Up to 9K (9216) bytes  Layer 3  IPv4 routing Wirespeed routing of IPv4 packets Up to 1K static routes and up to 128 IP interfaces  IPv6 routing Classless Interdomain Routing (CIDR)  Layer 3 Interface Configuration of Layer 3 interface on physical port, LAG, VLAN interface, or loopback interface  DHCP relay at Layer 3 Relay of DHCP traffic across IP domains  User Datagram Protocol (UDP) relay Telay  DHCP Server Switch functions as an IPv4 DHCP server serving IP addresses for multiple DHCP pools/scopes Support for DHCP options  Security  Secure Sockets Layer (SSL) SSH is a secure replacement for Telnet traffic. SCP also uses SSH. SSH v1 and v2 are supported Secures Sockets Layer (SSL) SSL support: Encrypts all HTTPS traffic, allowing highly secure access to the browser-based management GU in the switch  802.1X: RADIUS authentication and accounting, MD5 hash; guest VLAN; unauthenticated VLAN, single/multiple host mode and single/multiple sessions Supports time-based 802.1X Dynamic VLAN assignment  Web-based authentication Operating systems  STP Bridge Protocol Data Unit (BPDU) Guard  A security mechanism to protect the network from invalid configurations. A port enabled for BPDU Guard is shut down if a BPDU message is received on that port	Protocol (IGMP) versions 1, 2,	
Loopback Detection Loopback detection provides protection against loops by transmitting loop protocol packets out of ports on which loop protection has been enabled. It operates independently of STP  Jumbo frames  Up to 9K (9216) bytes  Layer 3  IPv4 routing  Wirespeed routing of IPv4 packets Up to 1K static routes and up to 128 IP interfaces  IPv6 routing  Wirespeed routing of IPv6 packets  Support for CIDR  Classless Interdomain Routing (CIDR)  Layer 3 Interface  Configuration of Layer 3 interface on physical port, LAG, VLAN interface, or loopback interface  PhCP relay at Layer 3  Relay of DHCP traffic across IP domains  User Datagram Protocol (UDP) Relay of broadcast information across Layer 3 domains for application discovery or relaying of bootP/DHCP packets  Support for DHCP options  Security  Secure Shell (SSH) Protocol  SCH is a secure replacement for Telnet traffic. SCP also uses SSH. SSH v1 and v2 are supported  Secure Sockets Layer (SSL)  SSL support: Encrypts all HTTPS traffic, allowing highly secure access to the browser-based management GU in the switch  802.1X: RADIUS authentication and accounting, MD5 hash; guest VLAN; unauthenticated VLAN, single/multiple host mode and single/multiple sessions Supports time-based 802.1X Dynamic VLAN assignment  Web-based authentication  Web based authentication provides network admission control through web browser to any host devices and operating systems  STP Bridge Protocol Data Unit (BPDU) Guard  A security mechanism to protect the network from invalid configurations. A port enabled for BPDU Guard is shut down if a BPDU message is received on that port	IGMP Querier	
Jumbo frames Up to 9K (9216) bytes  Layer 3  IPv4 routing Wirespeed routing of IPv4 packets Up to 1K static routes and up to 128 IP interfaces  Wirespeed routing of IPv6 packets Up to 1K static routes and up to 128 IP interfaces  IPv6 routing Classless Interdomain Routing (CIDR)  Layer 3 Interface Configuration of Layer 3 interface on physical port, LAG, VLAN interface, or loopback interface  DHCP relay at Layer 3 Relay of DHCP traffic across IP domains  User Datagram Protocol (UDP) relay Checkets Support for DHCP server switch functions as an IPv4 DHCP server serving IP addresses for multiple DHCP pools/scopes Support for DHCP options  Security  Secure Shell (SSH) Protocol Secure Scelets Layer (SSL) SSL support: Encrypts all HTTPS traffic, allowing highly secure access to the browser-based management GUI in the switch In the switch Supports time-based 802.1X Dynamic VLAN assignment  Web-based authentication Web based authentication provides network admission control through web browser to any host devices and operating systems  STP Bridge Protocol Data Unit (BPDU) Guard is shut down if a BPDU message is received on that port	Head-Of-Line (HOL) blocking	HOL blocking prevention
Layer 3	Loopback Detection	
IPv4 routing	Jumbo frames	Up to 9K (9216) bytes
Up to 1K static routes and up to 128 IP interfaces	Layer 3	
Classless Interdomain Routing (CIDR)  Support for CIDR  Support for CIDR  Configuration of Layer 3 interface on physical port, LAG, VLAN interface, or loopback interface  DHCP relay at Layer 3 Relay of DHCP traffic across IP domains  User Datagram Protocol (UDP) Relay of broadcast information across Layer 3 domains for application discovery or relaying of bootP/DHCP packets  DHCP Server Switch functions as an IPv4 DHCP server serving IP addresses for multiple DHCP pools/scopes Support for DHCP options  Secure Shell (SSH) Protocol SSH is a secure replacement for Telnet traffic. SCP also uses SSH. SSH v1 and v2 are supported  Secure Sockets Layer (SSL) SSL support: Encrypts all HTTPS traffic, allowing highly secure access to the browser-based management GUI in the switch  IEEE 802.1X (Authenticator role) 802.1X: RADIUS authentication and accounting, MD5 hash; guest VLAN; unauthenticated VLAN, single/multiple host mode and single/multiple sessions  Supports time-based 802.1X Dynamic VLAN assignment  Web-based authentication Web based authentication provides network admission control through web browser to any host devices and operating systems  STP Bridge Protocol Data Unit (BPDU) Guard  A security mechanism to protect the network from invalid configurations. A port enabled for BPDU Guard is shut down if a BPDU message is received on that port	IPv4 routing	Wirespeed routing of IPv4 packets
Classless Interdomain Routing (CIDR)  Layer 3 Interface Configuration of Layer 3 interface on physical port, LAG, VLAN interface, or loopback interface  DHCP relay at Layer 3 Relay of DHCP traffic across IP domains  User Datagram Protocol (UDP) Relay of broadcast information across Layer 3 domains for application discovery or relaying of bootP/DHCP packets  DHCP Server Switch functions as an IPv4 DHCP server serving IP addresses for multiple DHCP pools/scopes Support for DHCP options  Security  Secure Shell (SSH) Protocol SSH is a secure replacement for Telnet traffic. SCP also uses SSH. SSH v1 and v2 are supported  Secure Sockets Layer (SSL) SSL support: Encrypts all HTTPS traffic, allowing highly secure access to the browser-based management GUI in the switch  IEEE 802.1X (Authenticator role) 802.1X: RADIUS authentication and accounting, MD5 hash; guest VLAN; unauthenticated VLAN, single/multiple host mode and single/multiple sessions  Supports time-based 802.1X  Dynamic VLAN assignment  Web-based authentication Web based authentication provides network admission control through web browser to any host devices and operating systems  STP Bridge Protocol Data Unit (BPDU) Guard  A security mechanism to protect the network from invalid configurations. A port enabled for BPDU Guard is shut down if a BPDU message is received on that port		Up to 1K static routes and up to 128 IP interfaces
Routing (CIDR)  Layer 3 Interface Configuration of Layer 3 interface on physical port, LAG, VLAN interface, or loopback interface  DHCP relay at Layer 3 Relay of DHCP traffic across IP domains  User Datagram Protocol (UDP) Relay of broadcast information across Layer 3 domains for application discovery or relaying of bootP/DHCP packets  DHCP Server Switch functions as an IPv4 DHCP server serving IP addresses for multiple DHCP pools/scopes support for DHCP options  Security  Secure Shell (SSH) Protocol SSH is a secure replacement for Telnet traffic. SCP also uses SSH. SSH v1 and v2 are supported SSL support: Encrypts all HTTPS traffic, allowing highly secure access to the browser-based management GUI in the switch  IEEE 802.1X (Authenticator role) 802.1X: RADIUS authentication and accounting, MD5 hash; guest VLAN; unauthenticated VLAN, single/multiple host mode and single/multiple sessions Supports time-based 802.1X Dynamic VLAN assignment  Web-based authentication Web based authentication provides network admission control through web browser to any host devices and operating systems  STP Bridge Protocol Data Unit (BPDU) Guard A security mechanism to protect the network from invalid configurations. A port enabled for BPDU Guard is shut down if a BPDU message is received on that port	IPv6 routing	Wirespeed routing of IPv6 packets
DHCP relay at Layer 3  User Datagram Protocol (UDP) relay  Relay of broadcast information across Layer 3 domains for application discovery or relaying of bootP/DHCP packets  Switch functions as an IPv4 DHCP server serving IP addresses for multiple DHCP pools/scopes Support for DHCP options  Secure Shell (SSH) Protocol  SSH is a secure replacement for Telnet traffic. SCP also uses SSH. SSH v1 and v2 are supported  Secure Sockets Layer (SSL)  SSL support: Encrypts all HTTPS traffic, allowing highly secure access to the browser-based management GUI in the switch  IEEE 802.1X (Authenticator role)  802.1X: RADIUS authentication and accounting, MD5 hash; guest VLAN; unauthenticated VLAN, single/multiple host mode and single/multiple sessions Supports time-based 802.1X Dynamic VLAN assignment  Web-based authentication  Web based authentication provides network admission control through web browser to any host devices and operating systems  STP Bridge Protocol Data Unit (BPDU) Guard  A security mechanism to protect the network from invalid configurations. A port enabled for BPDU Guard is shut down if a BPDU message is received on that port		Support for CIDR
User Datagram Protocol (UDP) Relay of broadcast information across Layer 3 domains for application discovery or relaying of bootP/DHCP packets  DHCP Server Switch functions as an IPv4 DHCP server serving IP addresses for multiple DHCP pools/scopes Support for DHCP options  Security  Secure Shell (SSH) Protocol SSH is a secure replacement for Telnet traffic. SCP also uses SSH. SSH v1 and v2 are supported  Secure Sockets Layer (SSL) SSL support: Encrypts all HTTPS traffic, allowing highly secure access to the browser-based management GUI in the switch  IEEE 802.1X (Authenticator role) 802.1X: RADIUS authentication and accounting, MD5 hash; guest VLAN; unauthenticated VLAN, single/multiple host mode and single/multiple sessions Supports time-based 802.1X Dynamic VLAN assignment  Web-based authentication Web based authentication provides network admission control through web browser to any host devices and operating systems  STP Bridge Protocol Data Unit (BPDU) Guard is shut down if a BPDU message is received on that port	Layer 3 Interface	Configuration of Layer 3 interface on physical port, LAG, VLAN interface, or loopback interface
packets  DHCP Server Switch functions as an IPv4 DHCP server serving IP addresses for multiple DHCP pools/scopes Support for DHCP options  Security  Secure Shell (SSH) Protocol SSH is a secure replacement for Telnet traffic. SCP also uses SSH. SSH v1 and v2 are supported  Secure Sockets Layer (SSL) SSL support: Encrypts all HTTPS traffic, allowing highly secure access to the browser-based management GUI in the switch  IEEE 802.1X (Authenticator role) 802.1X: RADIUS authentication and accounting, MD5 hash; guest VLAN; unauthenticated VLAN, single/multiple host mode and single/multiple sessions Supports time-based 802.1X Dynamic VLAN assignment  Web-based authentication Web based authentication provides network admission control through web browser to any host devices and operating systems  STP Bridge Protocol Data Unit (BPDU) Guard A security mechanism to protect the network from invalid configurations. A port enabled for BPDU Guard is shut down if a BPDU message is received on that port	DHCP relay at Layer 3	Relay of DHCP traffic across IP domains
Secure Shell (SSH) Protocol SSH is a secure replacement for Telnet traffic. SCP also uses SSH. SSH v1 and v2 are supported Secure Sockets Layer (SSL) SSL support: Encrypts all HTTPS traffic, allowing highly secure access to the browser-based management GUI in the switch  IEEE 802.1X (Authenticator role) 802.1X: RADIUS authentication and accounting, MD5 hash; guest VLAN; unauthenticated VLAN, single/multiple host mode and single/multiple sessions Supports time-based 802.1X Dynamic VLAN assignment  Web-based authentication Web based authentication provides network admission control through web browser to any host devices and operating systems  STP Bridge Protocol Data Unit (BPDU) Guard A security mechanism to protect the network from invalid configurations. A port enabled for BPDU Guard is shut down if a BPDU message is received on that port		
Secure Shell (SSH) Protocol Secure Sockets Layer (SSL) Secure Secure Secure Replacement for Telnet traffic. SCP also uses SSH. SSH v1 and v2 are supported Secure Sockets Layer (SSL) Secure Sockets Layer (SSL) Secure Sockets Layer (SSL) Secure Secure Secure Replacement for Telnet traffic. SCP also uses SSH. SSH v1 and v2 are supported Secure Sockets Layer (SSL) Secure Secure Secure Replacement for Telnet traffic. SCP also uses SSH. SSH v1 and v2 are supported Secure Secure Access to the browser-based management GUI in the switch Secure Secure Access to the browser-based management GUI in the switch Secure Secure Access to the browser-based management GUI in the switch Secure Secure Access to the browser-based management GUI in the switch Secure Secure Access to the browser-based management GUI in the switch Secure Secure Access to the browser-based management GUI in the switch Secure Secure Access to the browser-based management GUI in the switch Secure Secure Access to the browser-based management GUI in the switch Secure Access to the browser-based management GUI in the switch Secure Access to the browser-based management GUI in the switch Secure Access to the browser-based management GUI in the switch Secure Access to the browser-based management GUI in the switch Secure Access to the browser-based management GUI in the	DHCP Server	
SSL support: Encrypts all HTTPS traffic, allowing highly secure access to the browser-based management GUI in the switch  802.1X (Authenticator role)  802.1X: RADIUS authentication and accounting, MD5 hash; guest VLAN; unauthenticated VLAN, single/multiple host mode and single/multiple sessions Supports time-based 802.1X Dynamic VLAN assignment  Web-based authentication  Web based authentication provides network admission control through web browser to any host devices and operating systems  STP Bridge Protocol Data Unit (BPDU) Guard  A security mechanism to protect the network from invalid configurations. A port enabled for BPDU Guard is shut down if a BPDU message is received on that port	Security	
in the switch    IEEE 802.1X (Authenticator role)   802.1X: RADIUS authentication and accounting, MD5 hash; guest VLAN; unauthenticated VLAN, single/multiple host mode and single/multiple sessions   Supports time-based 802.1X   Dynamic VLAN assignment	Secure Shell (SSH) Protocol	SSH is a secure replacement for Telnet traffic. SCP also uses SSH. SSH v1 and v2 are supported
(Authenticator role)  single/multiple host mode and single/multiple sessions Supports time-based 802.1X Dynamic VLAN assignment  Web-based authentication  Web based authentication provides network admission control through web browser to any host devices and operating systems  STP Bridge Protocol Data Unit (BPDU) Guard  A security mechanism to protect the network from invalid configurations. A port enabled for BPDU Guard is shut down if a BPDU message is received on that port	Secure Sockets Layer (SSL)	
operating systems  STP Bridge Protocol Data Unit (BPDU) Guard  A security mechanism to protect the network from invalid configurations. A port enabled for BPDU Guard is shut down if a BPDU message is received on that port		single/multiple host mode and single/multiple sessions Supports time-based 802.1X
(BPDU) Guard shut down if a BPDU message is received on that port	Web-based authentication	
STP Root Guard  This prevents edge devices not in the network administrator's control from becoming Spanning Tree Protocol		
root nodes	STP Root Guard	

Feature	Description				
DHCP snooping	Filters out DHCP messages with unregistered IP addresses and/or from unexpected or untrusted interfaces. This prevents rogue devices from behaving as DHCP Servers				
IP Source Guard (IPSG)	When IP Source Guard is enabled at a port, the switch filters out IP packets received from the port if the source IP addresses of the packets have not been statically configured or dynamically learned from DHCP snooping. This prevents IP Address Spoofing				
Dynamic ARP Inspection (DAI)	The switch discards ARP packets from a port if there are no static or dynamic IP/MAC bindings or if there is a discrepancy between the source or destination addresses in the ARP packet. This prevents man-in-the-middle attacks				
IP/MAC/Port Binding (IPMB)	The preceding features (DHCP Snooping, IP Source Guard, and Dynamic ARP Inspection) work together to prevent DOS attacks in the network, thereby increasing network availability				
Secure Core Technology (SCT)	Makes sure that the switch will receive and process management and protocol traffic no matter how much traffic is received				
Secure Sensitive Data (SSD)	A mechanism to manage sensitive data (such as passwords, keys, and so on) securely on the switch, populating this data to other devices, and secure autoconfig. Access to view the sensitive data as plaintext or encrypted is provided according to the user-configured access level and the access method of the user				
Layer 2 isolation Private VLAN Edge (PVE) with community VLAN	PVE (also known as protected ports) provides Layer 2 isolation between devices in the same VLAN, supports multiple uplinks				
Port security	The ability to lock source MAC addresses to ports and limits the number of learned MAC addresses				
RADIUS/TACACS+	Supports RADIUS and TACACS authentication. Switch functions as a client				
Storm control	Broadcast, multicast, and unknown unicast				
RADIUS accounting	The RADIUS accounting functions allow data to be sent at the start and end of services, indicating the amount of resources (such as time, packets, bytes, and so on) used during the session				
DoS prevention	Denial-Of-Service (DOS) attack prevention				
ACLs	Support for up to 512 rules				
	Drop or rate limit based on source and destination MAC, VLAN ID or IP address, protocol, port, Differentiated Services Code Point (DSCP)/IP precedence, TCP/UDP source and destination ports, 802.1p priority, Ethernet type, Internet Control Message Protocol (ICMP) packets, IGMP packets, TCP flag, time-based ACLs supported				
Quality of Service					
Priority levels	8 hardware queues				
Scheduling	Strict priority and Weighted Round-Robin (WRR)				
	Queue assignment based on DSCP and class of service (802.1p/CoS)				
Class of service	Port based; 802.1p VLAN priority based; IPv4/v6 IP precedence/Type of Service (ToS)/DSCP based; Differentiated Services (DiffServ); classification and remarking ACLs, trusted QoS				
Rate limiting	Ingress policer; egress shaping and rate control; per VLAN, per port, and flow based				
Congestion avoidance	A TCP congestion avoidance algorithm is required to minimize and prevent global TCP loss synchronization				
Standards

Feature	Description					
Remote Monitoring (RMON)	Embedded RMON software agent supports 4 RMON groups (history, statistics, alarms, and events) for enhanced traffic management, monitoring, and analysis					
IPv4 and IPv6 dual stack	Coexistence of both protocol stacks to ease migration					
Firmware upgrade	<ul> <li>Web browser upgrade (HTTP/HTTPS) and TFTP and upgrade over SCP running over SSH</li> <li>Upgrade can be initiated through console port as well</li> <li>Dual images for resilient firmware upgrades</li> </ul>					
Port mirroring	Traffic on a port can be mirrored to another port for analysis with a network analyzer or RMON probe. Up to 8 source ports can be mirrored to one destination port. A single session is supported					
VLAN mirroring	Traffic from a VLAN can be mirrored to a port for analysis with a network analyzer or RMON probe. Up to 8 source VLANs can be mirrored to one destination port. A single session is supported					
DHCP (options 12, 66, 67, 82, 129, and 150)	DHCP options facilitate tighter control from a central point (DHCP server) to obtain IP address, autoconfiguration (with configuration file download), DHCP relay, and hostname					
Secure Copy (SCP)	Securely transfer files to and from the switch					
Autoconfiguration with Secure Copy (SCP) file download	Enables secure mass deployment with protection of sensitive data					
Text-editable config files	Config files can be edited with a text editor and downloaded to another switch, facilitating easier mass deployment					
Smartports	Simplified configuration of QoS and security capabilities					
Auto Smartports	Applies the intelligence delivered through the Smartport roles and applies it automatically to the port based on the devices discovered over Cisco Discovery Protocol or LLDP-MED. This facilitates zero-touch deployments					
Textview CLI	Scriptable command-line interface. A full CLI as well as a menu-based CLI is supported. User privilege levels 1, 7, and 15 are supported for the CLI					
Cloud services	Support for Cisco Small Business FindIT Network					
Localization	Localization of GUI and documentation into multiple languages					
Other management	Traceroute; single IP management; HTTP/HTTPS; SSH; RADIUS; port mirroring; TFTP upgrade; DHCP client; BOOTP; SNTP; Xmodem upgrade; cable diagnostics; ping; syslog; Telnet client (SSH secure support)					
Time-based port operation	Link up or down based on user-defined schedule (when the port is administratively up)					
Time-based PoE	Capability for power to be on or off based on a user-defined schedule to save energy					
Login banner	Configurable multiple banners for web as well as CLI					
Power Efficiency						
EEE Compliant (802.3az)	Supports 802.3az on all copper ports (SG350 models)					
Energy Detect	Automatically turns power off on Gigabit Ethernet and 10/100 RJ-45 port when detecting link down  Active mode is resumed without loss of any packets when the switch detects the link up					
Cable length detection	Adjusts the signal strength based on the cable length for Gigabit Ethernet models. Reduces the power consumption for cables shorter than 10m					
Disable port LEDs	LEDs can be manually turned off to save on energy					
General						
Jumbo frames	Frame sizes up to 9K (9216) bytes supported on 10/100 and Gigabit interfaces					
MAC table	Up to 16K (16384) MAC addresses					
Discovery						
Bonjour	The switch advertises itself using the Bonjour protocol					
Link Layer Discovery Protocol (LLDP) (802.1ab) with LLDP-MED extensions	LLDP allows the switch to advertise its identification, configuration, and capabilities to neighboring devices that store the data in a MIB. LLDP-MED is an enhancement to LLDP that adds the extensions needed for IP phones					
Cisco Discovery Protocol	The switch advertises itself using the Cisco Discovery Protocol. It also learns the connected device and its characteristics via Cisco Discovery Protocol					

Feature	Description					
Power over Ethernet (PoE)						
802.3af PoE, 802.3at PoE+, and 60W PoE power are delivered over any of the RJ- 45 ports within the listed	Switches support 802.3at PoE+, 802.3af, 60W PoE, and Cisco prestandard (older) PoE. Maximum power of 60W to any 10/100 or Gigabit Ethernet port for PoE+ supported devices and 15.4W for PoE supported devices, until the PoE budget for the switch is reached. The total power available for PoE per switch is as follows:					
power budgets	Model Name	Power Dedicate	d to PoE Num	Number of Ports That Support PoE

Feature	Description

#### **Package Contents**

- Cisco 350 Series Switch
- Power Cord (Power Adapter for Desktop SKUs)
- Mounting Kit included in all SKUs, including desktop models
- Console Cable
- Quick Start Guide

#### **Minimum Requirements**

- Web browser: Mozilla Firefox version 8 or later; Microsoft Internet Explorer version 7 or later, Safari, Chrome
- Category 5 Ethernet network cable
- TCP/IP, network adapter, and network operating system (such as Microsoft Windows, Linux, or Mac OS X) installed on each computer in the network

## **Ordering Information**

Table 2 provides ordering information for the Cisco 350 Series Switches. Table 3 gives region- and country-specifice information, and Table 4 provides MFE and MGE transceiver ordering information.

 Table 2.
 Cisco 350 Series Switches Ordering Information

Model Name	Order Product ID Number	Description		
Fast Ethernet				
SF350-08	SF350-08-K9-xx	• 8 10/100 ports		
SF352-08	SF352-08-K9-xx	8 10/100 ports     2 Gigabit copper/SFP combo		
SF352-08P	SF352-08P-K9-xx	8 10/100 ports with 62W power budget     2 Gigabit copper/SFP combo		
SF352-08MP	SF352-08MP-K9-xx	8 10/100 ports with 128W power budget     2 Gigabit copper/SFP combo		
SF350-24	SF350-24-K9-xx	<ul><li>24 10/100 ports</li><li>2 Gigabit copper/SFP combo + 2 SFP ports</li></ul>		
SF350-24P	SF350-24P-K9-xx	<ul> <li>24 10/100 PoE+ ports with 185W power budget</li> <li>2 Gigabit copper/SFP combo + 2 SFP ports</li> </ul>		
SF350-24MP	SF350-24MP-K9-xx	<ul> <li>24 10/100 PoE+ ports with 375W power budget</li> <li>2 Gigabit copper/SFP combo + 2 SFP ports</li> </ul>		
SF350-48	SF350-48-K9	<ul><li>48 10/100 ports</li><li>2 Gigabit copper/SFP combo + 2 SFP ports</li></ul>		
SF350-48P	SF350-48P-K9	<ul> <li>48 10/100 PoE+ ports with 382W power budget</li> <li>2 Gigabit copper/SFP combo + 2 SFP ports</li> </ul>		
SF350-48MP	SF350-48MP-K9	<ul><li>48 10/100 PoE+ ports with 740W power budget</li><li>2 Gigabit copper/SFP combo + 2 SFP ports</li></ul>		
Gigabit Ethernet				
SG350-8PD	SG350-8PD-K9	<ul> <li>8 10/100/1000 ports</li> <li>2 2.5G ports</li> <li>2 combo mini-GBIC ports</li> </ul>		
SG350-10	SG350-10-K9	8 10/100/1000 ports     2 combo mini-GBIC ports		
SG350-10P	SG350-10P-K9	8 10/100/1000 PoE ports with 62W power budget     2 Combo mini-GBIC ports		
SG350-10MP	SG350-10MP-K9	<ul><li>8 10/100/1000 PoE ports with 128W power budget</li><li>2 Combo mini-GBIC ports</li></ul>		

Model Name	Order Product ID Number	Description
SG355-10P	SG355-10P-K9	8 10/100/1000 PoE+ ports with 62W power budget     2 Combo mini-GBIC ports
SG350-10SFP	SG350-10SFP-K9	<ul><li> 8 SFP Gigabit slots</li><li> 2 Gigabit copper/SFP combo</li></ul>
SG350-20	SG350-20-K9	<ul><li>16 10/100/1000 ports</li><li>2 Gigabit copper/SFP combo + 2 SFP ports</li></ul>
SG350-28	SG350-28-K9	<ul><li>24 10/100/1000 ports</li><li>2 Gigabit copper/SFP combo + 2 SFP ports</li></ul>
SG350-28P	SG350-28P-K9	<ul> <li>24 10/100/1000 ports (24 PoE ports with 195W power budget)</li> <li>2 Gigabit copper/SFP combo + 2 SFP ports</li> </ul>
SG350-28MP	SG350-28MP-K9	<ul> <li>24 10/100/1000 ports (24 PoE+ ports with 382W power budget)</li> <li>2 Gigabit copper/SFP combo + 2 SFP ports</li> </ul>
SG350-28SFP	SG350-28SFP-K9	<ul><li>24 SFP Gigabit slots</li><li>2 Gigabit copper/SFP combo</li></ul>
SG350-52	SG350-52-K9-xx	<ul> <li>48 10/100/1000 ports</li> <li>2 Gigabit copper/SFP combo + 2 SFP ports</li> </ul>
SG350-52P	SG350-52P-K9-xx	<ul> <li>48 10/100/1000 ports</li> <li>2 Gigabit copper/SFP combo + 2 SFP ports</li> </ul>
SG350-52MP	SG350-52MP-K9-xx	<ul> <li>48 10/100/1000 ports</li> <li>2 Gigabit copper/SFP combo + 2 SFP ports</li> </ul>

Each combo mini-GBIC port has one 10/100/1000 Ethernet port and one mini-GBIC/SFP Gigabit Ethernet slot, with one port active at a time.

The -xx in the Product Order ID Number is a country-/region-specific suffix. For example, the complete PID of SG350-28P for the United States is SG350-28P-K9-NA. Please refer to Table 2 for the correct suffix to use for your country/region.

 Table 3.
 Country/Region Suffix for Product Order ID Number

Suffix	Country/Region
-NA	USA, Canada, Mexico, Colombia, Chile and rest of LATAM
-BR	Brazil
-AR	Argentina
-EU	EU, Russia, Ukraine, Israel, UAE, Turkey, Egypt, South Africa, Indonesia, Philippines, Vietnam, Thailand, India, Korea
-UK	United Kingdom, Saudi Arabia, Qatar, Kuwait, Singapore, Hong Kong, Malaysia
-AU	Australia, New Zealand
-CN	China
-IN	• India
-JP	• Japan
-KR	Korea

The products may also be available in a country/region not listed in Table 3. Not all product models are offered in all countries/regions. For India, either -EU or -IN suffix will be used depending on product models. For Korea, either -EU or -KR suffix will be used depending on product models. Please consult with your local Cisco sales representative or Cisco partners for more details.

Table 4. MFE and MGE Transceiver Ordering Information

MGE Transceivers	
MGBLH1	1000BASE-LH SFP transceiver, for single-mode fiber, 1310 nm wavelength, support up to 40 km
MGBSX1	1000BASE-SX SFP transceiver, for multimode fiber, 850 nm wavelength, support up to 550 m

## A Powerful, Affordable Foundation for Your Small Business Network

As you strive to make your employees as productive and effective as possible, your business applications and information and the network that delivers them become ever more vital parts of your business. You need a technology foundation that can meet your business's needs today and in the future and that delivers the right feature set at the right price. The Cisco 350 Series portfolio of managed switches provides the reliability, performance, security, and capabilities you need to power your business.

## Cisco Capital

## Financing to Help You Achieve Your Objectives

Cisco Capital can help you acquire the technology you need to achieve your objectives and stay competitive. We can help you reduce CapEx. Accelerate your growth. Optimize your investment dollars and ROI. Cisco Capital financing gives you flexibility in acquiring hardware, software, services, and complementary third-party equipment. And there's just one predictable payment. Cisco Capital is available in more than 100 countries. Learn more.
